1. Purpose of Green Procurement

As global environmental problems are becoming increasingly serious, our reduction of environmental impact is becoming an essential condition for realizing a sustainable society in future.

Shindengen Group ensures that “manufacturing of products is aligned with our environmental conservation goals”; by prioritizing procurement of environmentally friendly materials and parts for our products, also known as the “Green Procurement” initiative.

This standard shows our basic policy for the green procurement. We proceed to prioritize the deal with partners and procurement from suppliers who meet this standard.

2. Scope

The standard applies to the delivered materials which are built into product (including package materials and included materials) shipped by Shindengen Electric Manufacturing Co., Ltd. and its affiliate companies (Shindengen Group). Also, goods which are delivered in the state of directly contacted to the materials are included as well.

*Please note that there may be a possibility for the product to be contaminated unintentionally in the process of manufacturing and during transportation.

3. Terms and definitions

The following are the definitions of the terms used in this form.

In case there is another definition in the “Green Procurement” related documents, the subject document takes precedence over this document.

1) Shindengen Group

Shindengen group consists of Shindengen Electric Manufacturing Co., Ltd. and its affiliate companies. For the coverage of Shindengen group, please refer to the information in the following URL (Excluding NAPINO AUTO & ELECTRONICS LTD.).

Shindengen Electric Manufacturing Co., Ltd. URL <https://www.shindengen.co.jp/>

2) Chemical substance

“Chemical substance” means a chemical element and its compound in the nature state or generated by any manufacturing process. It includes all added ingredients to preserve its stability and any impurities deriving from the applied process. However, any solvents that may be separated without affecting stability of the substance and changing its composition are excluded.

3) Mixture

“Mixture” means result of combining two or more chemical substances.

4) Article

“Article” means a body of which function is determined by its specific shape, surface or design provided by the production process more than its chemical composition.

5) Chemical product

“Chemical product” collectively means chemical substance and mixture.

6) Declarable substances

“Declarable substance” means in principle, a chemical substance which corresponds to the management standard of information transfer scheme of chemicals in products (chemSHERPA). In addition, in some cases the substances which is not applied as declarable one in chemSHERPA is treated as a declarable substance if our customers require. (Please refer to the annex for the chemSHERPA-related management standard)

7) Material and part

“Material and part” means raw materials and parts which produce a product shipped by Shindengen group. In addition to them, the subject term specifies package material and materials included in the same package.

8) Containing

“Containing” means either intentionally or unintentionally making something be a composition element of material such as addition, filling, mixing or adhesion (including contamination deriving from chemical reaction, unintentional mixing or adhesion).

Regarding chemical substance which is specified with the maximum tolerated concentration value, it is not considered “containing” if it contains less than maximum tolerated concentration value. In this case, it is necessary to provide sufficient information (substance name, concentration value and application) for appropriate management of the substance.

9) Intentional addition

“Intentional addition” means a state where a chemical substance is added to material and part successively or temporally with purpose to give a specific feature, appearance or quality.

10) Impurity

“Impurity” means a chemical substance contained in natural material and cannot be removed technologically through the general purification process to make industrial material; or a chemical substance generated through the chemical synthesis and cannot be removed technologically. In addition, when using the chemical called impurity for the purpose of maintaining / changing the characteristics of parts, the subject chemical substances are treated as intentional addition.

11) Concentration

“Concentration” means unless otherwise noted, weight percentage (wt%) of specified substance to homogeneous material (weight ratio ppm must be written with weight percentage (1,000 ppm = 0.1 wt%)). Homogeneous material means one material of uniform composition throughout and should be a minimum unit which cannot be disjointed or separated into different materials by mechanical actions.

12) Prohibited substances in products

In principle, it means chemical prohibited to be added to a part and component. Regarding chemical substance which is specified the maximum tolerated concentration value, it does not consider addition if it contains less than maximum tolerated concentration value. In this case, please provide us with sufficient information (substance name, concentration value and application, etc.) for appropriate management of the subject substance.

In addition, in some cases, prohibited substance in product is to be added individually, depending on our customers' requirements. (Please refer to the Annex or specified Substance Group and Example Substance)

13) Exemption

Although a substance may be prohibited to use, exemption allows the usage through alternative technology. (Please provide information based on the latest information regarding the applicable exemptions.)

14) Information of Chemicals in Products (CiP)

Description of chemicals contained in part and component.

4. Acquisition of information of chemicals in products (CiP)

To implement the Green Procurement strategy, each company of Shindengen Group requests that all suppliers managing the chemical substances comply with the "Guidelines for the management of chemicals in products (CiP)" issued by JAMP.

Please refer to JAMP website for the latest version of "Guidelines for the management of chemicals in products (CiP)".

JAMP URL <https://chemsherpa.net/>

1) Information request

Please provide information along with the contents which Shindengen group request to all suppliers. In addition, required contents may be different by item due to the situation of our product lines and industry trends.

2) Prescribed form

- Certificate of Non-inclusion

It is a guarantee on the chemical substances (substance group) we prohibit to contain for our part and component. Sometimes we request our partner to issue the certificate using the form of individual business unit, depending on our customers' requirement.

- chemSHERPA-CI

The chemSHERPA-CI can be used as a common scheme for information handling across a supply chain. Chemical information handling between supply-chain partners is essential for appropriate management of chemical substances in products (Chemical products), in order to continuously respond to expanding regulations.

- chemSHERPA-AI

The chemSHERPA-AI can be used as a common scheme for information handling across a supply chain. Article information handling between supply-chain partners is essential for appropriate management of chemical substances in products (Articles), in order to continuously respond to expanding regulations.

- JAPIA standard material datasheet

It is a sheet for information-transfer which is developed based on the agreement of JAPIA

for the survey of materials used for automobile and their chemicals in product (CiP).

- SDS (Safety Data Sheet)

It is a sheet for providing information of property and handling of chemical products and main chemicals in product (CiP).

- Various analysis data

It is a data of analysis/measurement of the concentration values of chemicals in product (CiP) for specific chemical substances.

If you cannot transfer the information about chemicals in product (CiP), using the above-mentioned forms, please consult with us individually.

3) Guideline on management of chemicals in product (CiP)

As for the prohibited chemicals in product, it is necessary to guarantee that prohibited chemicals in product which is specified maximum tolerated concentration value should be kept less than maximum tolerated concentration value. In addition, product not specified maximum tolerated concentration value should be guaranteed to be without intentional addition.

For declarable substances other than the prohibited substance of products, please communicate known substances information thoroughly. In addition, please make best efforts to acquire information from the point of view of compliance and the industry standards.

4) Information handling

We appropriately manage the given information on chemicals in product (CiP) provided and effectively use them for reporting of chemicals in product (CiP) of Shindengen.

5. Environment Quality Audit

We may conduct an environment quality audit on management system of chemicals in product (CiP) to all suppliers as needed.

Annex

1) Declarable Substances

Declarable substances of Shindengen Group are listed in Table 1. These are applicable to the management standard of Chemical Information Sharing and Exchange under Reporting Partnership in the supply chain (chemSHERPA). Additionally, in some cases, management standards may be added individually, based on our customers' requirements.

2) Prohibited substances in product

Among the declarable substances, the prohibited substances in product which Shindengen Group appoint are listed in table 2. It is necessary to guarantee the management standard (maximum tolerated concentration value) shown in table 2 except the exemption.

In addition, sample of prohibited substances in product are shown at the end of this document. We would like your cooperation as we sometimes add prohibited substances, depending on our customers' requirement.

- A list of examples of chemical substances which have been used electrical and electronic equipment and chemical substances restricted by laws and regulations. Not all chemical substances are covered.
 - All possible efforts have been made to ensure the accuracy of CAS number and other information, but the accuracy of such details is not guaranteed.
 - The [Sxxxx (the x's being a 5 digit number)] on example substances are the Shindengen substance management codes.
